Basic Physical Chemistry — World Scientific

Based on the principles of physics and mathematics to obtain quantitative relations, Physical Chemistry deals with the structure and dynamics of matter. These relations are mainly concerned with phase and chemical equilibrium, or dynamic processes such as phase transitions, reaction kinetics, charge transport, and energy exchange between systems and surroundings.

Basic Physical Chemistry — Bookboon

It's possible to learn the basic concepts of chemistry online. Chemistry concepts should be studied in a logical order because concepts build upon each other. Jumping into the middle of the science can lead to confusion. While it's fine to learn chemistry principles online, be aware that the lab component is an important part of the science.

The atom is the basic unit of chemistry. It consists of a dense core called the atomic nucleus surrounded by a space occupied by an electron cloud. The nucleus is made up of positively charged protons and uncharged neutrons (together called nucleons), while the electron cloud consists of negatively charged electrons which orbit the nucleus. In a neutral atom, the negatively charged electrons balance out the positive charge of the protons.
