An anterior discectomy and fusion (ACDF) is the most commonly used method for most cervical herniated discs. During the surgery, the disc is removed through a small incision in the front of the neck. The cervical spine can either be approached from the front (anterior approach) or from the back (posterior approach). In general, where possible, most surgeons favor an anterior approach for most conditions.

Cervical Spine Surgery - Spine-health

Common types of neck surgeries include: Cervical Spinal Fusion, Anterior Cervical Discectomy And Fusion, Anterior Cervical Corpectomy Fusion, Laminectomy, Laminoplasty, Artificial Disk Replacement, and Posterior Cervical Laminoforaminotomy. The recovery time depends on the type of surgery involved to treat the condition.
