The Nikon Df is unique among digital SLRs in that not only can it meter with manual focus AI Nikkors, but also with older non-AI Nikkors! It does this by using a folding meter coupling lever which can be moved out of the way when mounting non-AI lenses - something that would damage a non-folding lever.

1. How Camera Autofocus Works. The nice thing about digital cameras today is that they come with all kinds of sophisticated autofocus features. If back in the day one had to master both manual focus and autofocus features of their cameras to get images that were in focus, today, one can simply switch to the correct autofocus mode and let the camera do all the hard work.

Nikon Z6 II uses a new 24 megapixel Full-frame sensor as incorporates many of the features and improvements brought in the last years by competitors like Olympus, Fuji and Sony. These mirrorless improvements mainly focus on enhanced speed, with now on sensor phase detection AF points and an entirely new processor.
