Parasite infection discovery could assist mental health ...
The association between parasite and host can be divided into spatial and temporal relationships. In spatial relationship the part of the host ' s body is exploited by the parasite i.e. endow and ectoparasitism. Temporal relationship means that is the time that the parasite spends in or on its host. Gut parasites are permanent lodgers, certain ectoparasites attach to host while they feed and mosquito and to tsetse fly are examples and are called occasional visitors.

Parasite Summary | GradeSaver

Parasitism is a symbiotic relationship between species, where one organism, the parasite, lives on or inside another organism, the host, causing it some harm, and is adapted structurally to this way of life. The entomologist E. O. Wilson has characterised parasites as "predators that eat prey in units of less than one".

Parasite - an overview | ScienceDirect Topics

Fish tapeworm, giant kidney worm, and echinostoma infections are commonly caused by consuming raw or undercooked fish. The presence of all three of these parasites would suggest a general level of contamination in the settlement area, and it is easy to see how this might have happened, as the settlement was built over a very slowmoving channel.
