Vascular disease is a major cause of morbidity and mortality in older Americans and one that has been largely ignored or treated as an orphan of mainstream cardiology. This deficiency in the specialty of cardiovascular disease is beginning to be addressed by medical specialty boards and training programs.

Vascular Disease in the Elderly | Circulation

The sections on risk factor management, vascular aging, and the pathophysiology of vascular disease are particularly useful. Deficiencies: Venous insufficiency and the differential diagnosis of the swollen limb are covered minimally.

Vascular Disease in the Elderly - Mayo Clinic Proceedings

Early signs of vascular dementia can include mild: slowness of thought difficulty with planning trouble with understanding problems with concentration changes to your mood or behaviour problems with memory and language (but these are not as common as they are in people with Alzheimer's disease)

symptoms of vascular dementia - NHS - NHS

inant forms of vascular insult to the kidneys seen with aging: hypertensive nephrosclerosis, arteriolar hyalinosis, and ath-erosclerotic renal artery stenosis. Microscopic Vascular Disease in the Kidney With Aging: Nephrosclerosis As systemic hypertension worsens, an increase in renal vascu-lar resistance and a progressive decrease in effective renal

Chapter 13: Vascular Disease in the Elderly

Patients with renal vascular disease have a significantly worse prognosis than other diagnostic groups, most likely due to their older age, underlying vascular disease, and coronary artery disease.

(PDF) Vascular Disease in the Elderly - ResearchGate

Vascular dementia develops when brain cells are deprived of oxygen and die. This happens either because of diseases of the very small blood vessels deep in the brain (known as subcortical vascular dementia), or after a major stroke or a series of smaller strokes (both known as stroke-related dementia).

Peripheral arterial disease (PAD) is a chronic arterial, occlusive disease of the lower extremities caused by atherosclerosis. PAD may cause intermittent claudication, which is pain or weakness with walking that is relieved with rest. Only one-half of elderly persons with documented PAD are symptomatic.

Treatment of Peripheral Arterial Disease in the Elderly ...

Peripheral arterial disease (PAD) develops only in the arteries, which carry oxygen-rich blood away from the heart. According to the CDC, approximately 12 to 20 percent of people over age 60...

Peripheral Vascular Disease: Types, Causes, and Risk Factors

Vascular diseases range from problems with your arteries, veins, and vessels that carry lymph to disorders that affect how your blood flows. A disease can mean your tissues aren't getting enough...

Vascular Disease: Types, Causes, Treatment, Prevention

Peripheral arterial disease (PAD) is a common condition where a build-up of fatty deposits in the arteries restricts blood supply to leg muscles. It's also known as peripheral vascular disease (PVD). Symptoms of peripheral arterial disease Many people with PAD have no symptoms.

Peripheral arterial disease (PAD) - NHS

Cardiovascular disease is the major cause of death and disability in the elderly. Atherosclerotic coronary heart disease is the most prevalent problem, followed by hypertensive cardiovascular disease. Calcific aortic stenosis is the most common haemodynamically important valvular lesion; surgical correction significantly improves the prognosis.

Cardiovascular disease in the elderly

VASCULAR DISEASE IN THE ELDERLY INTRODUCTION : #1 Vascular Disease In The Elderly Publish By C. S. vascular disease in the elderly

By the year 2030, one in four persons in the United States will be 65 years of age or older. 35 Although the elderly are the most vulnerable of all age groups to the effects of vascular diseases ...

Lp(a) Lipoprotein, Vascular Disease, and Mortality in the ...

Factors that increase your risk of developing peripheral artery disease include: Smoking; Diabetes; Obesity (a body mass index over 30) High blood pressure; High cholesterol; Increasing age, especially after reaching 50 years of age; A family history of peripheral artery disease, heart disease or stroke

Peripheral artery disease (PAD) - Symptoms and causes ...

Heart valve diseases are fairly common. Aortic stenosis, or narrowing of the aortic valve, is the most common valve disease in older adults. Transient ischemic attacks (TIA) or strokes can occur if blood flow to the brain is disrupted. Other problems with the heart and blood vessels include the following:

Aging changes in the heart and blood vessels: MedlinePlus ...

Abstract-To assess the age- and sex-specific prevalence of peripheral arterial disease (PAD) and intermittent claudication (IC) in an elderly population, we performed a population-based study in 7715 subjects (40% men, 60% women) aged 55 years and over. The presence of PAD and IC was determined by measuring the ankle-arm systolic blood pressure index (AAI) and by means of the World Health Organization/Rose questionnaire, respectively.

Peripheral Arterial Disease in the Elderly ...

Objective: To examine which atherosclerotic risk factors are determinants for peripheral arterial disease (PAD), we performed a population-based study in 6450 subjects (40% men, 60% women) aged 55 years and older. Methods: The presence of PAD was assessed by measuring the ankle-arm systolic blood pressure index (AAI); PAD was considered present if the AAI was lower than 0.90 in either leg.
